Buddhist Tzu Chi Medical Foundation

報告大綱

1. CAR-T介紹與流程簡介
2. 花蓮慈濟醫院治療經驗分享
3. 藥師在CAR-T治療扮演角色

Chimeric Antigen Receptor (CAR) T cell therapy

CAR heavy and light chain chains are components of the B-cell receptor

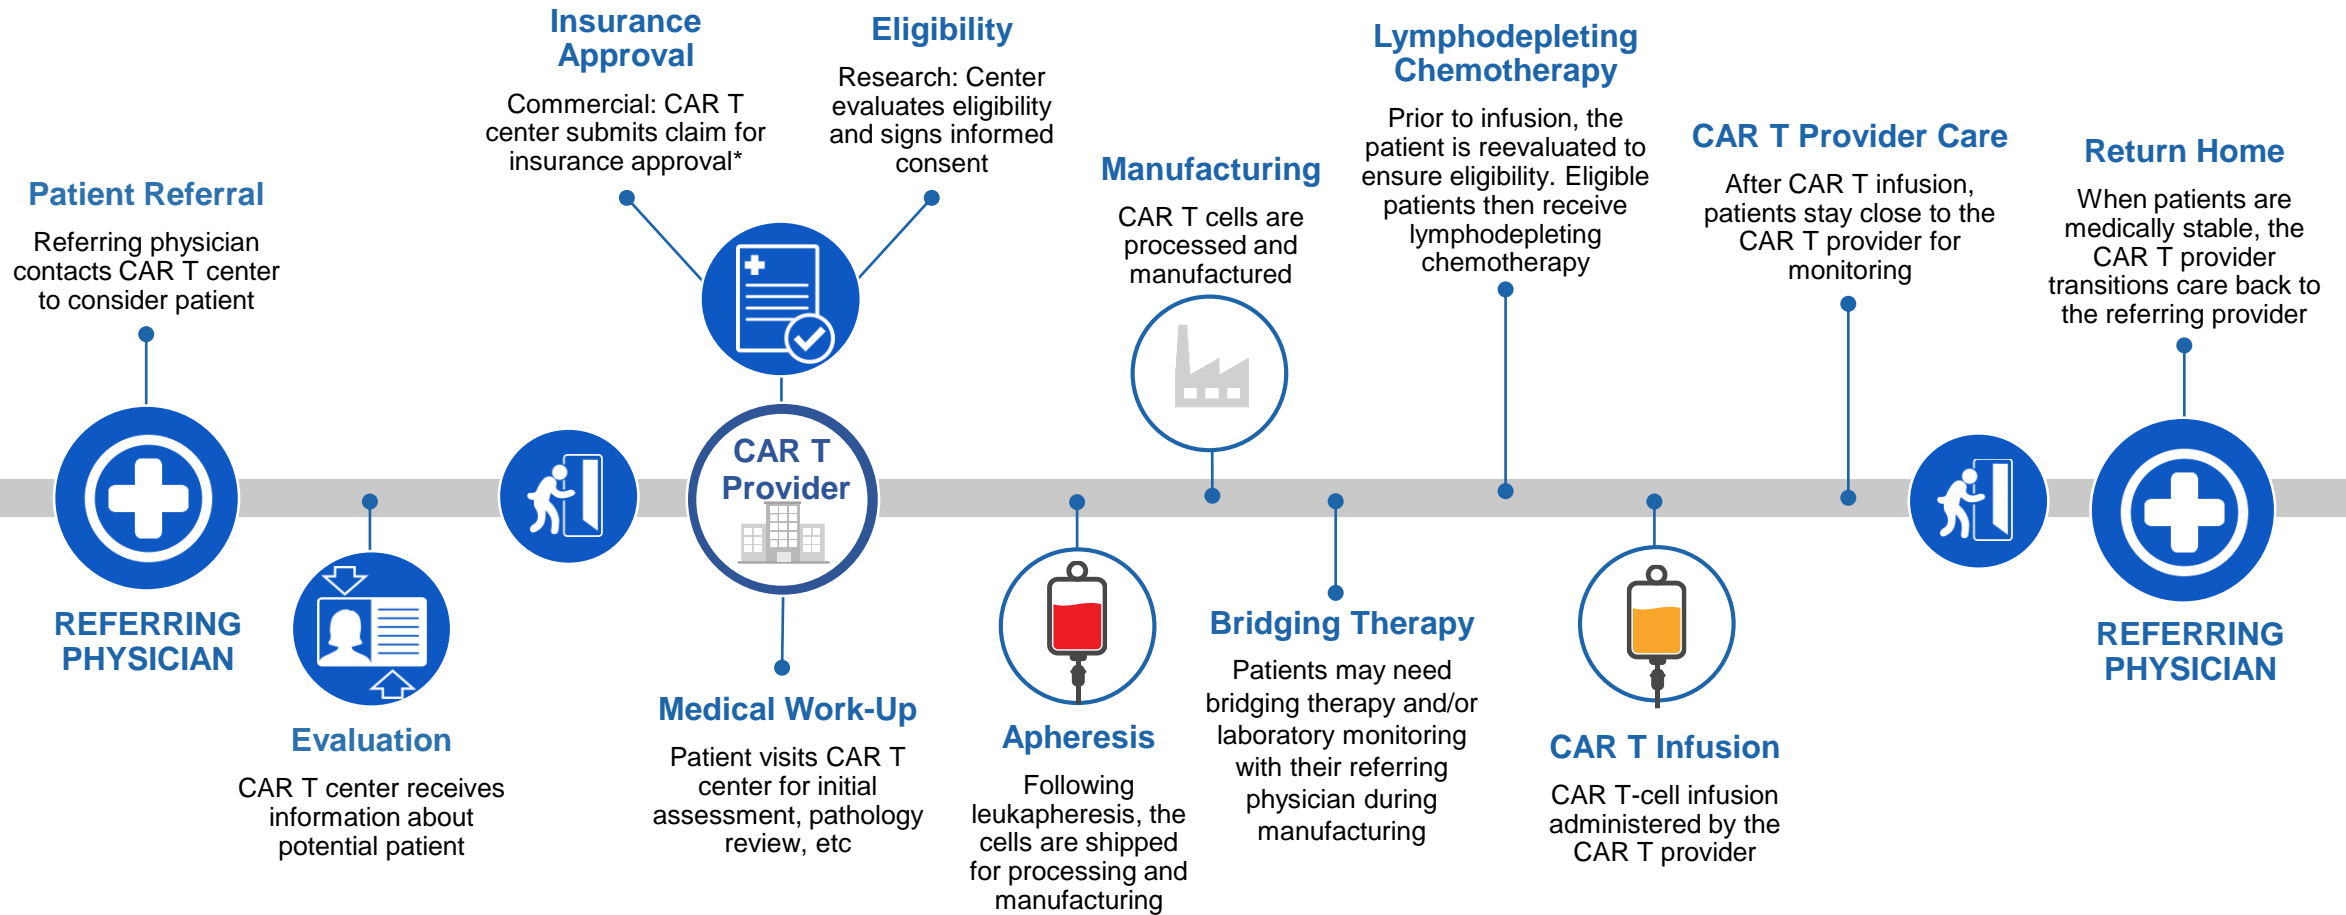

CARs integrate key components of intracellular TCR signaling and costimulatory domains

Tisa-Cel (Tisagenlecleucel, Kymriah®)

- 患有難治型、移植後復發、第二次或二次以上復發之B細胞急性淋巴性白血病 (ALL) 的25歲以下兒童和年輕成人病人
- 經兩線或兩線以上全身治療後之復發性或難治性瀰漫性大B細胞淋巴瘤 (DLBCL) 的成人病人
- 經兩線或兩線以上全身治療後之復發性或難治性濾泡性淋巴瘤 (FL) 成人病人

CAR-T治療高度個人化，流程的每個步驟都牽涉治療成果關鍵

CRS: Clinical Signs and Symptoms

 The hallmark presenting sign of CRS is fever that occurs after infusion of immune effector cells

Organ System	Symptoms and Findings Can Include
Constitutional	Fever ± rigors, malaise, fatigue, anorexia, myalgias, arthralgias, nausea, vomiting, headache
Skin	Rash
Gastrointestinal	Nausea, vomiting, diarrhea
Respiratory	Tachypnea, hypoxemia
Cardiovascular	Tachycardia, widened pulse pressure, hypotension, increased cardiac output (early), potentially diminished cardiac output (late),
Coagulation	Elevated D-dimer, hypofibrinogenemia ± bleeding, disseminated intravascular coagulation
Renal	Azotemia
Hepatic	Transaminitis, hyperbilirubinemia
Neurologic	Headache, mental status changes, confusion, delirium, word-finding difficulty or frank aphasia, hallucinations, tremor, altered gait, seizures

Cervical Edema as Local Cytokine Release Syndrome

--Cervical Edema Extending to the Larynx as Local Cytokine Release Syndrome Following Chimeric Antigen Receptor T-Cell Therapy in a Boy with Refractory Acute Lymphoblastic Leukemia

Cervical Edema as Local Cytokine Release Syndrome

-- Cervical Local Cytokine Release Syndrome Following Chimeric Antigen Receptor T-cell Therapy in Patients With Relapsed or Refractory Diffuse Large B-cell Lymphoma

- A. At the emergence of local cytokine release syndrome (CRS) on day five post-CAR-T cell infusion.
- B. After the resolution of local CRS.

透過Cell Chain追蹤進度

The screenshot displays the Novartis CellChain Classic Orders interface. At the top, there is a navigation bar with the Novartis logo and menu items: Dashboard, Orders, Finished Product Shipments, Infusion, and CellChain™ Classic Orders. The user is logged in as Ya-Hsien Wang. The main heading is "Order Summary" with a "Return to Dashboard" button. Below this is the "Product Order Details" section, which includes fields for Patient Name, Date of Birth, Indication/Clinical Trial (Diffuse Large B-Cell Lymphoma), Prescriber (Chi-Cheng Li), Ordering Hospital (Hualien Tzu Chi Hospital, Buddhist Tzu Chi Medical Foundation), Referral Center, and Novartis Batch ID. A progress bar at the bottom shows the following steps: ORDER (Confirmed, 30 Jul 2024 09:09 TAIPEI), APHERESIS (Received, 18 Aug 2024 12:28 CET), MANUFACTURING (QA Testing Completed, 08 Sep 2024), and DELIVERY (Delivered, 12 Sep 2024 13:00 TAIPEI). A green banner at the bottom right indicates "FINAL PRODUCT RELEASED".

(1) General and prophylactic order

On BMT routine

On Port-A with care

Avoid choking (due to XRT side effect), bed elevation 床頭搖高

Pain control with morphine and mouth care, for tongue/ oral ulcers

General medications:

Morphine Sulfate (15 mg) 1# TID

Morphine 5 mg SC q4h prn if oral pain

Sennoside 2# HS

Lactulose 20 cc prn if constipation

■ Anti-microbial prophylaxis

➢ Valaciclovir (Valtrex) 500mg 1# QD PO, to D+365 or CD4 > 200/uL

➢ Baktar (SMX-TMP) 1# QD PO, to D+365 or CD4 count > 200/uL

➢ Tenofovir alafenamide (Vemlidy) 25mg 1# QD PO, to D+365

■ TLS prevention (if high tumor burden): not applicable

■ Seizure prophylaxis (if history of CNS disease or seizure): not applicable

(2) Lymphodepleting chemotherapy order

148.4 cm / 50.1 kg (adjusted BSA 1.42 m²)

■ Regimen: FLU 25 mg/m²/day + CYC 250 mg/m²/d on D-5~D-3

➢ Fludarabine 35 mg in NS 100ml IVD 30min, QD on D-5~D-3 (10/19~10/21)

➢ Cyclophosphamide 350 mg in NS 100ml IVD 30min, QD D-5~D-3 (10/19~10/21)

■ Antiemetics (moderate risk)

➢ Aloxi (Palonosetron, 0.25mg) 1amp IVD 30min before chemotherapy, QOD on D-5 and D-3 (10/19,10/21)

➢ Metoclopramide 10mg 1amp IV TID on D-5 to D-3 (10/19~10/21)

■ Hydration: 2.5% GS (Suntose) 1500ml QD on D-5~D0 (10/19~10/24)

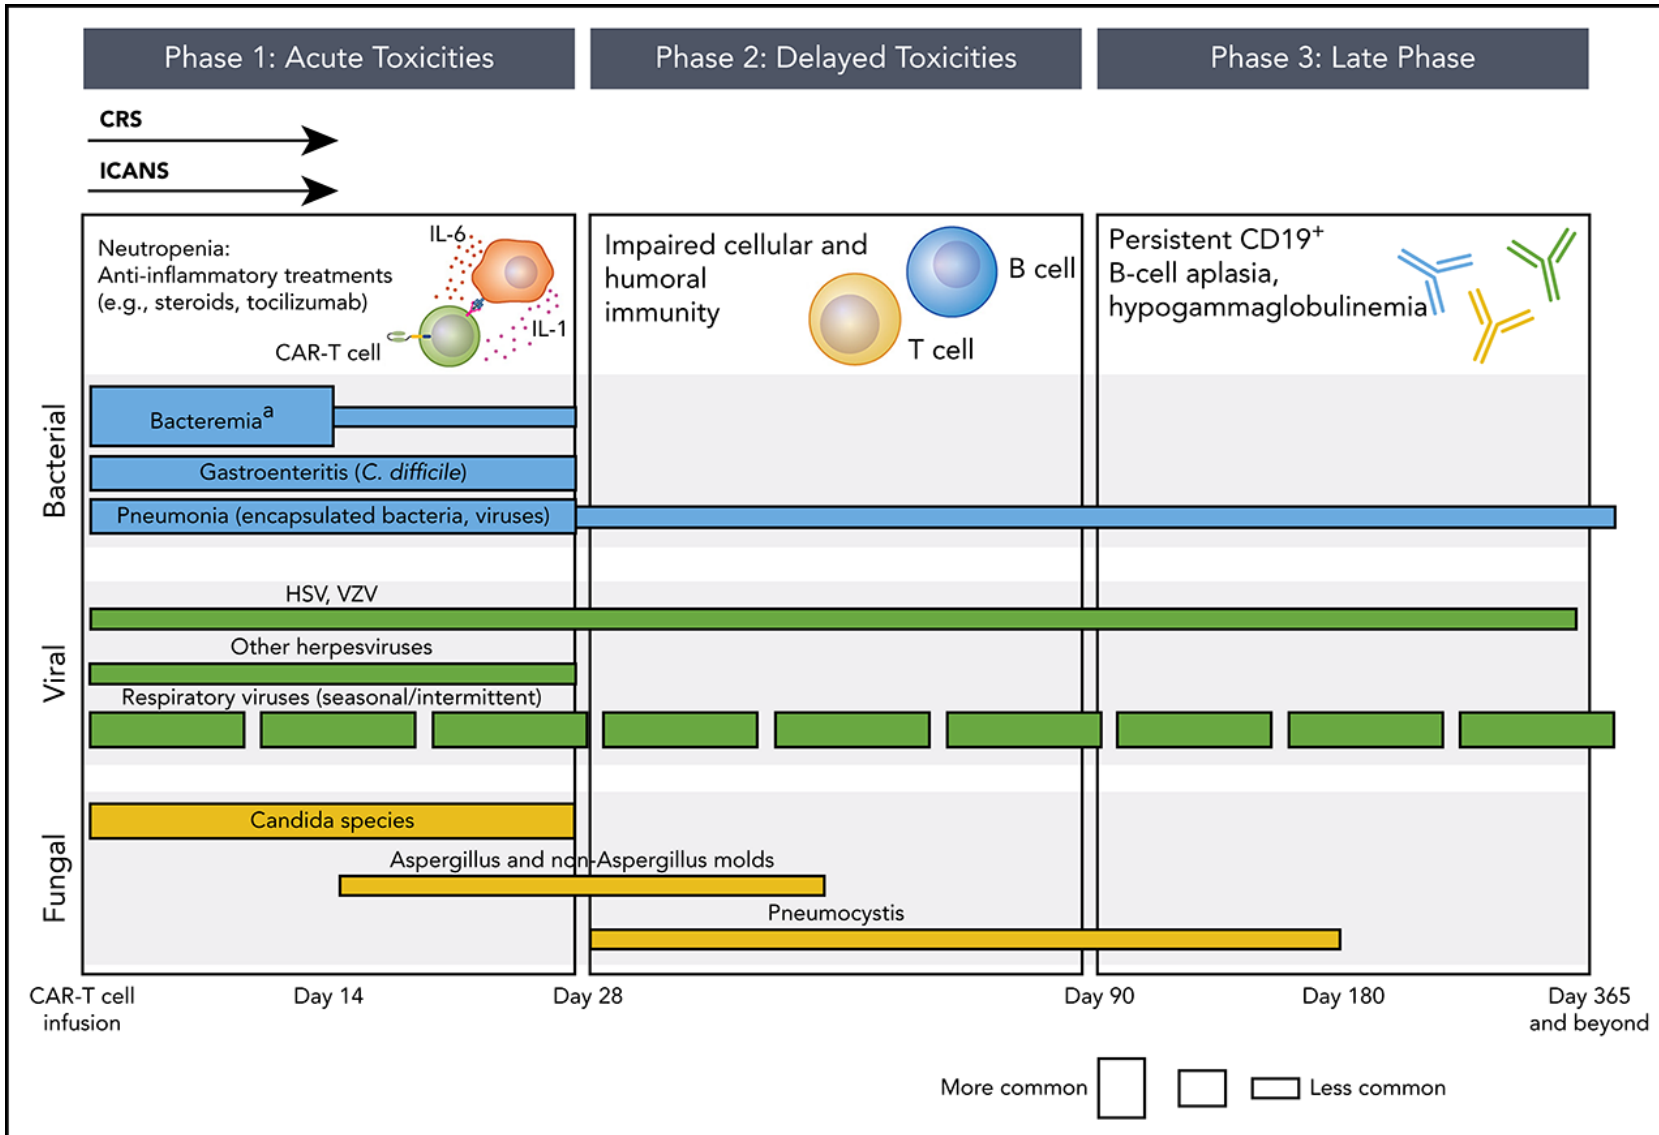

(3) CAR-T cell infusion

D0 (2024/10/24)

■ Dose: 3.8 x10⁸ total CAR+ viable T cells, 19 ml

■ Pre-medications:

➢ Acetaminophen 500mg 1# PO 30-60 min before CAR-T infusion

EBMT/EHA recommendation	
Bacterial—	Not routinely recommended. Levofloxacin or ciprofloxacin during neutropenia
Viral--	Acyclovir 800 mg BID or valacyclovir 500 mg BID for 1 year after CART infusion or CD4 count > 200/ μ L
Fungal—	Not routinely recommended. Can be consider in patients with severe or prolonged neutropenia and on corticosteroids .
PJP—	Co-trimoxazole 480 mg PO QD for 1 year after CART infusion or CD4 count > 200/ μ L
